A method of mediating male fertility in a plant is a provided that involves introducing an expression vector comprising a promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene. A method of producing hybrid seeds is also provided. I present sequence represents a Z. mays Ms45 promoter fragment
                  The invention provides a male tissue-preferred regulatory region (I) comprising nucleotide sequences essential for initiating transcription the MS45 gene. A method of mediating male fertility in a plant is
                                                                                                                                                                                    essential

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          promoter operably linked to (I) into a plant where the exogenous gene impacts male fertility of the plant and (I) controls expression of the exogenous gene. A method of producing hybrid seeds is also provided. The present sequence represents a DNA fragment -38 to -195 bases upstream of the TATA box of a Z. mays Ms45 male-tissue preferred regulatory region
                                                                                         The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting discussing engineers for the total discussing markers for the polynucleotides and encoded polypeptides are potential markers for the polynucleotides.
detecting, diagnosing, monitoring, characterising treating and obtentially preventing breast cancer. The polymucleotides and opolypeptides are also useful for isolating compounds with cytoactivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO200151628-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human;

Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACN78851-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated polypeptide associated with breast cancer, useful for detecting presence of polypeptide in sample, as a marker for breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

The present invention describes an isolated polynucleotide comprising a CC first, second, third, fourth or fifth nucleotide sequence, or their CC complement encoding a polypeptide either having flowering locus T gene CC (FT), terminal flower (TFL), or Apetala3 (Ap3) homologue activity. Also CC described: (1) a vector comprising the polynucleotide; (3) transforming a cell by transforming a cell with the polynucleotide; (3) transforming a cell by CC transforming a cell with the polynucleotide; (4) a cell comprising the CC recombinant DNA construct; (5) producing a plant comprising the transformed plant cell; (6) a plant comprising the recombinant DNA construct; (7) a seed comprising the recombinant DNA construct; (8) an CC isolated polynucleotide comprising a first nucleotide sequence is comprising a first nucleotide, where the Cfirst nucleotide sequence is comprised by another polynucleotide, where the other polynucleotide includes the second, third, fourth, fifth or CC sixth nucleotide sequence; (9) an isolated polypeptide having FT or Ap3 construct on the polynucleotide sequence; (9) an isolated polypeptide having FT or Ap3 construct on the polynucleotide comprising isolating the polypeptide from a CC encoded by the polynucleotide above; and (10) isolating a polypeptide containing a recombinant DNA construct comprising the polypucleotide polynucleotide sequence; (9) an isolated polynucleotide save useful containing a recombinant DNA construct comprising the polypucleotide containing a recombinant DNA construct comprising the polynucleotide comprising isolating the polynucleotide operably linked to a regulatory sequence. The polynucleotides are useful contained to the rate of cell division to enhance contribe sequence from the present sequence and tissue culture morphology and the rate of cell division to enhance contained to the present sequence represents an FT homologue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             flowering locus T gene; FT; terminal flower; TFL; Apetala3; Ap3; plant; floral development; plant sterility; plant fertility; flowering time; plant growth rate; inflorescence architecture; tissue culture morphology; cell division; FT homologue; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polynucleotides, specifically nucleic acid fragments encoding flowering locus T gene (FT) or terminal flower (TFL), or Apetala3 (Ap3) homologs, useful for floral development, e.g. engineering plant flowering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Danilevskaya O, Hermon P, Brı

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
The present sequence represents the P-Ztap promoter of maize. It is used CC in the method of the invention. The specification describes a method for the production of male sterile plants. The method comprises selective expression of DNA encoding a protein that causes tolerance to glyphosate CC and application of glyphosate. The method uses two DNA molecules, each CC operably linked to a separate promoter, whereby the first promoter CC functions in plant cells to produce a protein that causes tolerance to glyphosate, and the second promoter functions in plant cells to cause the production of a second RNA sequence in a male reproductive tissue. Expression of the DNA promotes tolerance to glyphosate in those tissues in which it is expressed. Expression of the second DNA molecule causes the production of an RNA sequence which can inhibit the glyphosate collerance generated by expression of the first DNA molecule. By using a CC promoter for the second DNA molecule which restricts the production of the antisense RNA to only a subset of the tissues which express the first DNA molecule, only the subset of tissues which the second DNA molecule is expressed will be susceptible to glyphosate toxicity. In this way, a specific cell type or combination of cell types, depending upon the promoters utilized, can be selectively ablated by application of cell undesirable crop outcrossing, and for lengthening flower life. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Production of male sterile plants using a gene encoding tolerance, used for, e.g. production of hybrid seed.

Its expression pattern indicates that Dul codes for SSII of maize endosperm. The Dul product contains unique sequence features in its N-terminus that may mediate direct interactions with other starch biosynthetic enzymes. Mutations within the maize SSII gene affect multiple aspects of starch biogenesis by disrupting an enzyme complex containing starch synthase(s), starch branching enzyme(s) and possibly starch debranching enzyme(s). The isolated cDNA can be used to provide an enzyme with which to regulate the production of starch, and with which to regulate the production of starch, and with which to produce altered or novel forms of starch, e.g. in transgenic plants. Expression of Dul in bacteria and yeasts also modifies glycogen production. Claimed expression vectors comprise the cDNA or fragments of it that code for functional portions of DUI

To illustrate the role of the du1 locus in starch biosynthesis, a transposor tagging strategy was used to isolate the gene and describe its polypeptide product. The invention reports tagging of the du1 locus with Mu transposon, cloning and characterisation of a portion of the gene, and isolation a near full-length cDNA (the present sequence). The amino acid sequence (see AAY06199) deduced from this cDNA indicates that Du1 codes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes an isolated DNA molecule encoding a fusion consisting of 4 different functional domains selected from glucan association domain (GLASS), linker domain (LINKR), glucosyl transferase domain (GLYTR), and C-terminal end (CTEND) which are operably linked to come another. The DNA molecule is useful for expressing in plants polypeptides including starch synthase enzymes as fusion proteins with improved affinity to starch and modified catalytic capabilities and to the in vivo and in vitro synthesis of glucan chains of modified lengths as compared to plants producing native starch or starch produced with native starch synthases. Expression of the starch synthase fusion proteins along with granule bound starch synthase (GBSS) will lead to a modified starch having an altered or improved morphology, retrogradation, waterbinding, or swelling potential of the granules, gel strength, adhesiveness, degree of branching, crystallinity, degree of cross-linking, and increased or decreased glucan chain lengths. This sequence encodes a starch synthase used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of a maize gene, dull 1 (DUI), and the polypeptide it encodes. The DUI polypeptide has starch synthase activity, and comprises an N-terminal arm region, a C-terminal catalytic region, and a region of about 900 amino acids terminating with the catalytic region. The C-terminal catalytic region has a catalytic domain comprising alpha-1,4-glycosyltransferase catalytic activity. The dul polynucleotide sequence is useful in producing starch e.g. from a transgenic plant or transfected cell. The present sequence encodes maize

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and control of the the mRNA molecule; and comprising: (a) incubating a marker nucleic acid (comprising any of the 1512 nucleic acid sequences or its complement or fragment) with a complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid, where the detection of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the present sequence was not shown in the specification but was obtained in electronic format from the USPTO web site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3 non-translated sequence that functions in the cell to cause termination of transcription and addition

                                                                                                                                                                                                                                                                                                                                                                                                                                   production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/ninhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Run on:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OM nucleic - nucleic search, using sw model
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
